

# Medicare Approved Health Plans & Those Suffering From Chronic Conditions?

# HEALTH CONDITIONS

Medicare Part C offers additional coverage options to its members that you can't get with Original Medicare.

Since there are **"no"** health questions those suffering from health conditions who have been locked into a **"high cost"** Medicare Supplement or **"denied"** due to health status could have an alternative.

Instead of being penalized for **"health conditions"** your client **"could"** be rewarded with extra benefits that focus on their chronic needs with a year-around enrollment opportunity.

# RISK FACTORS

Suffering from a Chronic Condition is nothing to be ashamed of. Many factors can make health complications more prevalent like age, gender, and family history. Also, the activities we do daily and the things we consume also play a large role in the development of certain chronic conditions.

Why should anyone go without adequate insurance or pay large monthly premiums due to a chronic condition?

Did you know one in five on Medicare suffers from five or more chronic conditions? In fact, 63% of those 65 -74, 78% 75-84, and 88% 85 and older, have at least 2 chronic conditions and are treated for those conditions on a regular basis.

- According to the Centers for Disease Control and Prevention, more than 100 million American adults are living with diabetes or pre-diabetes. The American Diabetes Association reports that about 25% (12 million) of U.S. Seniors, age 65 and older, have diagnosed or undiagnosed diabetes.
- The CDC states that around 15.7 million Americans report having COPD. This number could be higher, though, because over 50 percent of adults with low pulmonary function who were surveyed didn't know they had COPD, according to the CDC. People aged 65 and older were among those more likely to say they had COPD when surveyed in 2013.
